

# 360° Vacumatic

A 100% efficient and odourless waste disposal system, now available to purchase on a **versatile and affordable payment plan.**

**Keeping your facility odour-free isn't just about cleanliness. It's about respect and dignity.**

Vacumatic assists your waste disposal process by sanitising and hermetically sealing dirty waste bags.

This eliminates exposure to any potential viruses and bacteria, as well as destroying tell-tale odour at its source.

Our 360° Vacumatic package allows you to **spread the cost - not infection!**

## How does Vacumatic work?

- Vacumatic uses a medical grade filter to sterilise the extruded air from vacuumed disposal bags, eliminating exposure to odours and bacteria, whilst condensing waste into tightly sealed packages.
- Simply empty the waste into an airtight bag and Vacumatic will hermetically seal the contaminated material, ready for safe and easy disposal in the appropriate bin.
- Vacumatic bags are 110 microns thick, 100% odourless and airtight. They remove the problem of exposed waste and, most importantly, will help your facility to prevent the spread of dangerous infections.

### Vacumatic is...

Suitable for all types of non-offensive waste, and a safe alternative to bedpan washers/macerators.

Extremely quiet, using a validated air valve fitted with a medical grade bacterial filter.

Exceptionally economical, reducing waste volume by up to 50%.

Completely hands-free, reducing the risk of cross-contamination.

For a manageable monthly fee, 360° Vacumatic **prevents infection, protects health** and now helps you **preserve your budget** too.
